Summary

Forward Thinking Engineer. Focus: shadowing employees to learn how they work, building each person a custom AI agent that fits their day, and teaching them to use it well, then scaling across the company. Independent, AI-assisted developer of local workflow tools, desktop interfaces and source-grounded review workflows. Background includes service and hands-on work.

Experience

Independent Project Development - AI-Assisted Software & Evaluation | Oct 2025-present

Direct AI-assisted implementation, debugging, testing and review of local tools, API integrations and documented human next steps.

Selected Projects

Ergon - Windows Employee Assistant & Remote Support

OpenClaw, Node.js, C#, Windows, SQLite

Ergon case study

- Built and delivered a Windows employee-assistant installer with native Outis taskbar management and a Linux support service; the setup preserves employee data across upgrades.
- Implemented ticket-driven REST connector builds with exact read/write grants and device-scoped screen-control tools; activation and rollback require a local Gateway check.

Industry AI Suite - Source-Grounded Review Tools

Python, HTTP APIs, Local LLMs, HTML/CSS/JavaScript

Public source repository

- Built ten local review tools for finance, research, security and operations, with source receipts, human review, durable history, export and deletion.
- Added optional loopback model drafts from minimized findings, with citation checks and explicit failure handling.

dotz - Multi-Agent Coding Dashboard

Rust, axum, Tauri, JavaScript, SQLite

github.com/cayleb-james2008/dotz

- Built a Rust and Tauri coding-agent desktop with supervised tools, explicit provider routing and platform-specific process cleanup.
- Made local-model failures clear and added safe cleanup retries. Cross-platform CI passed on Linux, Windows and macOS.

Sophos - Coding-Agent Desktop

React, TypeScript, Tauri, JSON-RPC

github.com/cayleb-james2008/sophos

- Connected selected agent profiles to real daemon sessions and local model catalogs, with durable transcripts and restart recovery.
- Added daemon-backed context summarization, preserved provider configuration and clear runtime errors, with automated session and recovery checks.

Asmodeus - Research & Paper Replay

Rust, Historical Data, Local LLMs

Asmodeus case study

- Built a research and paper-replay system with verified historical data, chronological evaluation, persisted cursors, fees and duplicate-fill prevention.
- Added a guarded keyless local-model route, chronological train/validation/test slices and reviewable refutation records. The merged implementation passed Windows CI.

Skills

Languages: Python, Rust, TypeScript, JavaScript, HTML/CSS

Frameworks & data: React, Tauri, axum, REST, WebSockets, JSON-RPC, SQLite

AI & verification: Coding-agent orchestration, local LLM/API integration, source-grounded review, regression testing, pytest, Vitest, Cargo, Git/GitHub, Linux

Additional Experience

Robert H. Lord Company - Moving Crew | Summer 2025; 2026-present

David Cooke Plaster Co. - Plaster Work | Summer 2026

Dunkin' | 2024-2026

Tommy's Pizza | Summer 2024

Education

Portland High School | Portland, Connecticut | 2022-2026 | Graduated

Coursework: Cybersecurity; AP Computer Science

Selected engineering projects | Updated October 13, 2026.
