

Cayleb Alvarez-James

Applied AI & Developer Tools | Workflow Evaluation

Connecticut, USA · Remote-only · caylebalvarezjames@gmail.com

Summary

Independent, AI-assisted project developer working across coding-agent workflows, desktop interfaces, APIs, and source-grounded AI evaluation. Builds and tests local tools, translating bounded needs into traceable workflows with explicit uncertainty and useful human handoffs.

Experience

Independent Project Development — AI-Assisted Software & Evaluation · 2026

Direct coding-agent work through implementation, debugging, testing, and review across developer tools and local-source review workflows.

dotz — Multi-Agent Coding Dashboard

Rust, axum, Tauri, JavaScript, SQLite

- Integrated a local-first dashboard with a Rust/axum API, parallel coding-agent workflows, an inspectable workflow graph, local memory, and REST/WebSocket endpoints.
- Fresh isolated local Linux dotz-core run passed 824/824; 5/5 monitor-unit and 5/5 platform-regression tests passed. Current work remains in open draft PR #218.

Sophos — Graphical Agent Workspace

TypeScript, React, Tauri, Rust, Node.js

- Verified Inbox read-state plus theme/profile persistence after restart in the native Windows UI over demo IPC, not live provider inference. At the exact head of open draft PR #10, both Windows CI runs passed: eight suites, 57 case results without skip markers, and two skipped interaction branches.
- Built a graphical interface and expanded take on Prime Intellect's original Prime Agent concept, with React/TypeScript views and a Tauri desktop; the current implementation supports Windows. Prime Intellect is credited for the upstream runtime, daemon, and bridge.
- Separate open draft PR #9 baseline: 1,122 frontend tests and 47/47 Windows named-pipe checks passed; Windows x64 native-module loading and guarded MSI packaging were verified.

Industry AI Suite — Source-Grounded Review Workflows

Python, HTTP APIs, Local LLMs, HTML/CSS/JavaScript

- Built 10 bounded local review workflows using public or permitted inputs—including Treasury-row reconciliation, cited research checks, CISA vulnerability triage, and public-policy review—with dated source receipts and human handoffs.
- Ran the full post-merge test suite locally on public main: 370 tests and 178 subtests passed.
- September 26, 2026 witness record: 6 local-model exchanges; 5 cited outputs passed citation-ID checks and narrow source review. A privacy-filter/citation failure and documented corrected retry were retained.

Technical skills

Languages: Python, Rust, TypeScript, JavaScript, HTML/CSS

Frameworks & data: React, Tauri, axum, REST, WebSockets, JSON-RPC, SQLite

AI & verification: Coding-agent orchestration, local LLM/API integration, source-grounded review, regression testing, pytest, Vitest, Cargo, Git/GitHub, Linux

Additional experience

Dunkin' · 2024–2026

Robert H. Lord Company — Moving Crew · Summers 2025 & 2026

Tommy's Pizza · Summer 2024

David Cooke Plaster Co. — Plaster Work · Summer 2026

Education

Portland High School · Graduated 2026

Cybersecurity; AP Computer Science

Project evidence is dated. Draft / merged statuses reflect the October 5, 2026 resume snapshot, not a fresh release-readiness assessment.
