Cayleb Alvarez-James

Forward Thinking Engineer

Connecticut, USA | Remote-only | caylebalvarezjames@gmail.com

github.com/cayleb-james2008 | cayleb-james2008.github.io/agentic-resume/

Summary

Forward Thinking Engineer. Focus: shadow employees, build each a custom AI agent plus tools for any digital task they want automated, teach, scale. Goal: lower costs, no cuts to people. Independent, AI-assisted developer.

Experience

Independent Project Development - AI-Assisted Software & Evaluation | Oct 2025-present

Builds, tests and fixes software with AI help: local tools, app connections, clear next steps for people.

Selected Projects

Ergon - Personal Work Assistants & Remote Support

OpenClaw, Node.js, C#, Windows, SQLite

Ergon case study

- Built a Windows installer for employee AI assistants, with a taskbar app for setup and support. Employee data stays safe through updates.
- Built remote-repair tools and automatic connections to the apps a team already uses, each with approval and undo steps.

Industry AI Suite - Source-Checked Review Tools

Python, local AI models, web APIs

github.com/cayleb-james2008/industry-ai-suite | Review history implementation

- Built 10 tools that review finance, research, security and operations data. Every finding shows its source; a person makes the call.
- Added optional AI-written drafts that must cite their sources, plus saved history, review, export and delete.

dotz - AI Coding Agent Dashboard

Rust, Tauri, JavaScript, SQLite

github.com/cayleb-james2008/dotz

- Built a desktop app that runs and supervises AI coding agents, with model choice and safe cleanup.
- Made failures clear instead of silent. Core tests pass on Windows, macOS and Linux.

Sophos - Coding-Agent Desktop App

React, TypeScript, Tauri

github.com/cayleb-james2008/sophos

- Connected saved agent profiles and local AI models to a coding-agent desktop app.
- Sessions and transcripts survive restarts. Context summaries use the agent service; provider failures keep saved settings and show a clear error.

Asmodeus - Trading Research on Past Data

Rust, historical market data, local AI models

Asmodeus case study

- Built a research tool that tests trading ideas on real past market data, in time order, with no real money.
- Added safeguards so tests never peek at future data, plus records of rejected ideas for review.

Skills

Languages: Python, Rust, TypeScript, JavaScript, HTML/CSS

Apps & data: React, Tauri, SQLite, web APIs

AI & testing: AI agents and automation, local AI models, source-checked review, automated testing, Git/GitHub, Linux

Additional Experience

Robert H. Lord Company - Moving Crew | Summer 2025; 2026-present

David Cooke Plaster Co. - Plaster Work | Summer 2026

Dunkin' | 2024-2026

Tommy's Pizza | Summer 2024

Education

Portland High School | Portland, Connecticut | 2022-2026 | Graduated

Coursework: Cybersecurity; AP Computer Science
