
Project résumé / selected public work

Cayleb Alvarez-James · Applied AI and systems projects

Seeking remote-only software engineering and applied AI roles.

caylebalvarezjames@gmail.com · [GitHub profile](#) · [Interactive project lab](#)

This is a project résumé of selected public work, not a complete career-history record.

PUBLIC SYSTEMS

- **Industry AI Suite:** ten inspectable source-to-result journeys with a local read-only workbench and a hosted, dated replay. Each shows evidence, uncertainty, and a human handoff. [Public code](#) · [Recorded lab](#).
- **dotz:** local-first multi-agent coding dashboard with a Rust/axum API and Tauri shell. [Public repository](#).
- **Sophos:** Windows coding-agent project described as a port of Prime Intellect's Prime Agent; its README credits the upstream runtime, daemon, and bridge. [Public repository](#).

SOURCE-BOUND EXAMPLES

- **Treasury / LedgerBridge:** 10 Daily Treasury Statement rows accounted once, with exceptions routed for review. Public federal cash is not company books. [Exact query](#).
- **World Bank / MarketBrief + BacktestGuard:** 15 annual U.S. GDP observations supported a 5.02% nominal 2024–2025 comparison and an observation-year chronology check, not a securities conclusion or completed backtest. [Indicator and license](#): “License : CC BY-4.0” checked 2026-09-23 17:15:50 UTC.
- **CISA / SentinelDesk:** public KEV records become a CVE-linked review queue, not an organization alert or asset finding. [Official feed](#).
- **GovInfo / HandoffHub + OnboardPath + ReplyCraft:** official OPM proposed-rule document `2026-19222` supports a cited public-document handoff and a synthetic public-policy question about its DATES section. It is not employer policy, an employee record, or a customer case. [Official text](#).
- **GitHub / PipelineRelay:** public `pytest-dev/pytest` metadata supports a source-linked research handoff, not CRM, lead, or consent evidence. [Exact metadata](#).
- **SearchLift:** a dated, bounded read of one portfolio page found 10/10 approved workflow names; AI NOT RUN in that structural review. SearchLift before-state: an older capture found 0/10 approved workflow names. Neither read measures rankings, traffic, or whole-site SEO. [Public source](#).

AI PROOF AND LIMITS

- **Five local model samples:** LedgerBridge, MarketBrief, BacktestGuard, SentinelDesk, and OnboardPath produced cited public-source sentences. An independent witness verified the model exchanges on 2026-09-26; the app checked citation IDs, and the narrow statements were reviewed against their sources. [Witness and review notes](#).
- **Full enterprise job · UNVERIFIED for all ten.** Private company, customer, employee, CRM, and organization-asset sources are not present. No revenue, customer use, adoption, company deployment, trade, transfer, message send, or automated consequential decision is claimed.

SYSTEMS PRACTICE

Python · Rust · axum · Tauri · HTML · CSS · JavaScript · local-first interfaces · source provenance · permission boundaries · human approval gates · audit trails · fail-safe tests.
