SUMMARY

I build and run real AI systems: a multi-agent coding dashboard, autonomous control planes, and a governed engineering pipeline. Every claim below carries its receipt — tests, gates, and logs, verified on Windows + Linux.

PROJECTS

PDM Forge — vault simulator + governed pipeline (SIMULATOR project work)

- Vault demo exits 0: check-in, version increment, denied-without-permission, permitted-after-grant (receipt: vault-demo-receipt.txt).
- .NET service: 0 warnings, 0 errors; tests 39/39 passed (receipts: r3-build.log, r3-test-39.log).
- Workflow/access: restricted moves refused with missing role named; analyzer flags 4 risk classes; drift review 5 findings (receipts: 04-workflow-verify.log, 05-analyzer-report.txt, 06-drift-report.txt).
- Governed pipeline exits 0 (proposal, verdict, approval, execution, ledger); denied approval gives EXECUTION REFUSED (receipts: r3-b8-demo.log, r3-b8-denied.log).
- Tamper-evident ledger: intact verify CHAIN OK; one-byte tamper copy TAMPER DETECTED at entry 0 (receipts: r3-b9-chain.log, r3-b9-tamper.log).
- Release gate GATE PASS 8/8 (body 23.9185 g within 100.0 g limit, 316L, Approved); flipped advisory text leaves verdict UNCHANGED (receipt: r3-b10-gateproof.log).
- Fault suite: 5/5 RECOVERED SAFELY, NO DOUBLE APPLY on re-run (receipt: r3-b11-faults.log).
- Adapter parity 12/12 PARITY PASS (6 cases, both adapters); real adapter NEVER CONNECTED, spec only (receipt: r3-b12-parity.log).

AI systems — shipped and verified on Windows + Linux

- dotz: 813 tests passing; native-Rust (axum + Tauri) multi-agent coding dashboard, run on Windows + Linux (receipt: dotz-test-fresh.txt).
- sophos: 1,118 tests passing; Windows-native AI agent port, upstream credited (receipt: sophos-test-fresh.log).
- solomon: 1,190 tests passing + 1 deliberate integrity-gate test awaiting owner ratification; autonomous fleet control plane with human-gated money (receipt: solomon-test-baseline.txt).
- daedulus: 126 tests passing; LoRA/eval/promotion control plane, Rust CLI + Tauri (receipt: daedulus-test-fresh.log).
- morpheus: 53 tests passing; local-first Tauri app (receipt: morpheus-test-fresh.log).
- All five Rust/TS repos verified building + testing clean on Windows cross-checks and Linux; see each repo's OVERHAUL-NOTES.md.

PFV-100 valve family — REAL Linux-native CAD (CadQuery/OCCT), NOT SolidWorks

- 3 original variants (PFV-100/150/200, fictional); PFV-100 rev B: 3021.6284 mm³, 21 faces (receipt: properties.tsv).
- Deterministic rebuild: CAD suite 29/29 passed; re-run reproduces every number, golden hashes equal (receipts: fixround-verify.log, golden_diff.txt).

Honesty labels

- Vault = SIMULATOR project work, never an operational vault. CAD = real Linux-native measurement, not SolidWorks. Adapter written to spec, NEVER CONNECTED. Porting to the SOLIDWORKS PDM Professional API is design intent, untested: no connection ever made, no SolidWorks execution claimed.

SKILLS

Systems integration: adapter-seam design, parity-tested interfaces, drift review, vendor-scoped planning. Access/security: 4-class permission analysis, role-based workflow enforcement. Governance: release gates, human approvals, hash-chained ledgers, fault-safe recovery. Automation: CAD rebuilds with measured properties, one-command builds, dashboards, runbooks.

EXPERIENCE

- Tommy's Pizza — summer 2024.
- Dunkin' — 2024–2026 (2 years).
- RHL (Robert H. Lord Company), moving crew — summer 2025; returned to RHL again in 2026 (current).
- DCPC (David Cooke Plaster Co.), plaster work — summer 2026 (one month).

EDUCATION

- Portland High School, Portland CT — graduated 2026. Coursework: Cybersecurity; AP Computer Science (senior year).
